I respectfully request that you REJECT the NAB's petition 04-160. One of the reasons that I continue to subscribe to satellite radio is because I can get weather and traffic information from major markets in which I travel. This information 'is there'. I don't have to dial a cell phone or push buttons on the radio trying to find this information. If I had to do either of these I would be distracted from my driving obligations. If this information was not available to me I could end up in a weather or traffic situation which could have been avoided. I don't need more stress in my life.
